

QlikView 12.90: Is your reporting ready for what's next?

Support for QlikView 12.90 ends on 31 October 2026. Whichever path you choose, use this checklist to make sure your reports keep arriving.

1 Know your reports

- ☐ List every report that leaves QlikView today (PDF, Excel, PowerPoint, email exports)
- ☐ Note who receives each one: internal teams, management, partners, customers
- ☐ Mark which reports are personalized per recipient (by region, branch, customer)
- ☐ Rank them: which would hurt most if they stopped for a week?

2 Know your tools

- ☐ Which tools produce your reports today: QlikView Publisher, NPrinting, Mail & Deploy, scripts, manual exports?
- ☐ Do you use legacy components such as the QlikView OCX, Source Control or WorkBench? Qlik announced it is dropping these with the September 2026 release.
- ☐ Where do report templates, recipient lists and schedules live, and who maintains them?

3 Choose your path

- ☐ Upgrade to QlikView 12.100 (supported until 30 September 2027)
- ☐ Move to Qlik Sense on-premises
- ☐ Move to Qlik Cloud
- ☐ Running several platforms side by side for a while (for example QlikView and Power BI)?

4 Check your reporting for that path

- ☐ Will your report designs work on the new platform without rebuilding them?
- ☐ Can recipients without a Qlik license still receive their reports?
- ☐ Are all formats and delivery channels you need still supported?
- ☐ If you use NPrinting: which templates can migrate, and which must be rebuilt?
- ☐ What does reporting cost on the new platform, including usage-based fees?

5 Plan the switch

- ☐ Run old and new reports in parallel for at least one full reporting cycle
- ☐ Inform recipients if anything about their reports will change
- ☐ Retire reports nobody opens instead of migrating them

KEY DATES

QlikView 12.80 support ended **31 Oct 2025**

QlikView 12.90 support ends **31 Oct 2026**

QlikView 12.100 supported until **30 Sep 2027**

Need help? Book a free 30-minute Reporting Continuity Check.

Mail & Deploy works with QlikView, Qlik Sense and Qlik Cloud, so your reports stay the same while your platform changes.
